

## Claims

What is claimed is:

1. A holder which holds a container of drinking fluids, collects it's condensation and spilled fluids, and directs them to it's self contained reservoir comprising:

a holder with a upper rim that is taller than the container being held which collects spilled fluids;

a holder that contains the entire height of the held container utilizing its upper funnel and support ribs creating more room to access the held container while further allowing the spilled fluids to pass into the reservoir ;

a holder which stores spilled fluids and condensation within it's own self contained reservoir;

a self contained reservoir created from a centered vertical support column which provides support to the held container and creates an area to add weight, a magnet or lighting to its bottom open end;

a holder that directs spilled fluids and condensation into its self contained reservoir utilizing it's upper and lower funnel system;

a holder that can fit in existing cup holders and improve their function;

a holder that is portable and machine washable; and

A holder that can provide the above stated benefits and be manufactured in one piece.

2. the holder of claim 1 which utilizes a upper rim that is taller than the container being held to capture condensation and spilled fluids.

3. the holder of claim 1 which provides support to a held containers entire height utilizing its upper funnel and support rib combination thus creating more room to access the held container while further allowing the spilled fluids to pass below ;

4. the holder of claim one which provides a self contained reservoir created from a centered vertical support column which provides support to the held container separate from the containers spilled fluids furthermore creating an area to add weight, a magnet, or lighting by insertion in its open bottom end;
